

*Verteilte Web-basierte Systeme – SS 2006*

## Verteilte Web-basierte Systeme

Dr.-Ing. Martin Gaedke  
Universität Karlsruhe (TH)

*Verteilte Web-basierte Systeme – SS 2006*

## Part III

Aspects of the Life-Cycle

## Part 3 – Overview

1. People and Projects
2. Project Management
3. Web Software Process Models
4. Further Readings

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

3

*Verteilte Web-basierte Systeme – SS 2006*

## Chapter://1

## People and Projects

Part III ► Chapter://1 ► People and Projects

## Where it starts...

- ☉ ...Understanding the problem (wrt “Accomplishing a business need”)
- ☉ What is the problem domain?
  - Defining the problem – asking questions
  - Which requirements exist?
  - Does Evolution play a major role?
- ☉ The problem:
  - What does the customer need vs. What does the customer want

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

5

Part III ► Chapter://1 ► People and Projects

## Project Failure Rates

This chart depicts the outcome of the 30,000 application projects in large, medium, and small cross-industry U.S. companies tested by The Standish Group since 1994.

Source: The Standish Group International, *Extreme Chaos*, The Standish Group International, Inc., 2000  
<http://www.standishgroup.com/>

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

6

Part III ► Chapter://1 ► People and Projects

## Project Failure Rates (2)

**Lost:**

- California Dep. Of Motor Vehicles (45 mio US\$)
- American Airline (165 mio US\$)

**Success as planned:**

- Hyatt Hotels (15 million US\$)

1994    31%    53%    16%

This chart depicts the outcome of the 30,000 application projects in large, medium, and small cross-industry U.S. companies tested by The Standish Group since 1994.

Source: The Standish Group International, *Extreme Chaos, The Standish Group International, Inc., 2000*  
<http://www.standishgroup.com/>

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://1 ► People and Projects

## Steps in Planning a Project

- Definition of the problem
- Develop strategies for potential solutions
- Plan product team
- Plan production process
- Plan project management
- Plan costs and time

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://1 ► People and Projects

## Range of Complexity

Complex ↑

Simple ↓

Document Centered ←      Application Centered →

Static Site, Data Collector Site, Dynamic Data Access, Web Application, Dynamically Created Site, Service-Based Web Application and Federations, Service

Following "Web Site Engineering: Beyond Web Page Design", by Th. Powell et al.  
 Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://1 ► People and Projects

## Strategies

- Analyze existing solutions
  - Outsource
  - Find & Buy
- Develop new solution
  - From the scratch
  - **Development with Reuse**
- Desired Solution vs. Product Complexity vs. Time vs. Costs

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://1 ► People and Projects

## Learning from the past

- CHAOS Reports in more detail
  - Check for statistics and predictions
- Some numbers:
  - 33% Developed from scratch (traditional lang.)
  - 15% Purchased application & modified
  - 13% Developed from scratch (with obj. model)
  - ...5% purchased application & performed no modification
- One of the best outcomes
  - Success Factors!

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://1 ► People and Projects

## CHAOS Top Success Factors

Success Factor (2000)	Factor
Executive Management (No. 2 in 2003)	18
User Involvement (No. 1 in 2003)	16
Experienced Project Manager	14
Clear Business Objectives	12
Minimizing Scope	10
Requirements Process	8
Standard Software Infrastructure	6
Formal Methodology	6
Reliable Estimates	5
Skilled Staff	5

- What makes a project successful? Success factors identified in 2000.
- Cf. Standish Group Web Site

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://1 ► People and Projects

## Product Team

- ☉ You need a great team to develop great Web-applications/products
  - "Great" – is a difficult term, if you do not know what you are looking for...
  - "Candidate Attributes" include: Expertise, commitment, attitude, behavior, team skills, thirst for knowledge – usually candidates are great or perfect in all areas...
  - Your team composition must handle this
- ☉ Impact of bad choices
  - One poor candidate → "one bad apple can ruin the brunch" → do not hire / usually can be handled
  - Worse: longer period of bad staffing → low performance, bad detail and quality, late products

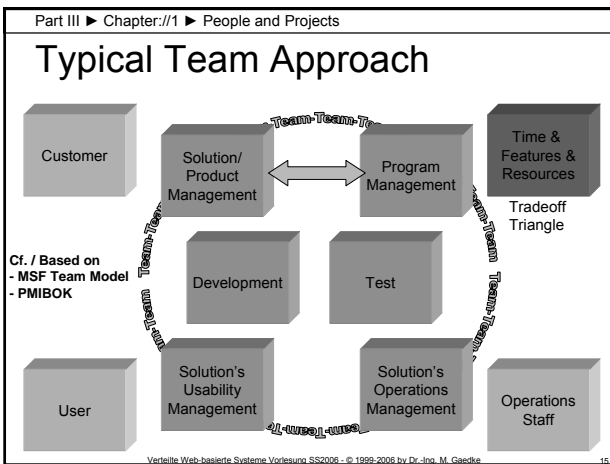

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://1 ► People and Projects

## Product Team II

- ☉ Small Teams!
  - CHAOS: Best success rates
  - 1999: time < 6 month, people < 6 and budget < 750.000 US\$
  - 2001: time < 4 month, people < 4 and budget < 500.000 US\$
  - Otherwise try to scale!
- ☉ Furthermore:
  - Minimize Scope, Open communication, and focus on using Standards

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

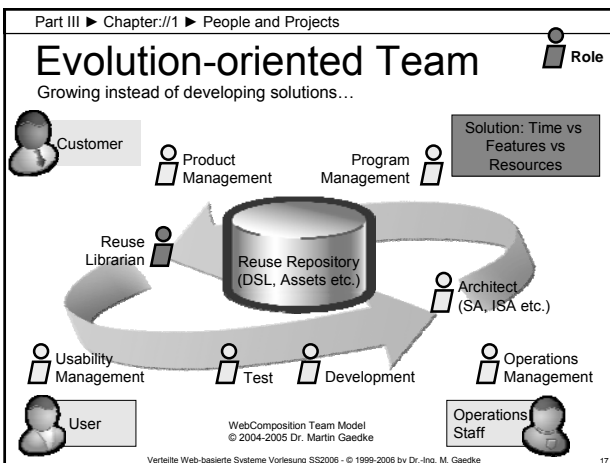

Part III ► Chapter://1 ► People and Projects

## Scaling MSF Team-Model

- ☉ You can combine some roles to teams as small as 3 people
  - Do not combine some (like Product and Program Manager, or anything with Developer)
- ☉ You can scale the teams by using two general methods
  - Functional Teams
    - Many people for one role
  - Feature Teams
    - Sub-teams for each feature

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://1 ► People and Projects

## Ready to go?

- ☉ Constantly check the team
- ☉ Prepare for status by questions:
  - Do I have the right users? Do I make involvement easy? Etc.
  - Does the key executives have a stake in the outcome? Do I have a well defined plan?
  - Prepare for change and risk management
- ☉ Prepare for CHANGE-Management
  - Stay agile – but remember (trace) why you did or changed something!

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Verteilte Web-basierte Systeme – SS 2006

Chapter://2

Project Management

Part III ► Chapter://2 ► Project Management

## Basics: Project & Tasks

- ☉ **Project** –
  - **Temporary endeavor undertaken to create a unique product or service**
  - I.e. set of activities which ends with specific accomplishment and which has
    - (1) Non-routine tasks,
    - (2) Distinct start/finish dates, and
    - (3) Resource constraints (time/money/people/equipment).
- ☉ "Tasks" are activities which must be completed to achieve project goal
  - Can have subtasks
  - Have start and end points (and has a duration)
  - Short relative to the project
  - And are significant (Use verb-noun form, e.g. "create design")
  - Use action verbs such as "create", "define" and "gather"

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

20

Part III ► Chapter://2 ► Project Management

## Basics: WBS & Program

- ☉ **Work Breakdown Statement (WBS)**
  - Categorized list of tasks with an estimate of resources required
- ☉ **Program**
  - A group of projects managed in a coordinated way to obtain benefits not available from managing them individually
  - E.g. Program: PRJ Design, PRJ Construction
  - E.g. Program: PRJ Version 1, PRJ Version 2

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

21

Part III ► Chapter://2 ► Project Management

## Project Problems

- ☉ Only ~28% of application projects are delivered **on time**
  - BUT 98% of these with project manager
- ☉ **Problems to solve:**
  - Unrealistic Schedules
    - May yield to artificial documents
  - Avoid cost of iteration/going back a stage
    - Rewriting documents by bad solutions
  - Seriously reviewing and approving takes time
    - Next stage may start before document approved
  - Deliverables not suitable for reuse-oriented models
    - Documents are likely to constrain reuse

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

22

Part III ► Chapter://2 ► Project Management

## PM Disciplines & Skills

- ☉ **Skills** – Usually general management
  - I.e. finance, planning (strategic, tactical, operational), work management, leading vs. managing, delegation, negotiation, etc.
- ☉ **Steps to start with**
  - Define Team, Methods and Standards
  - Define scope and vision of the project → Initiate Phase
  - Risk Management – is a MUST!
  - Report, monitor, review, control etc.
- ☉ **Many more exist**
  - **Project Management Institute Body of Knowledge**, provides over 35 years of experience
  - PM Knowledge Areas and required skills: Integration, Scope, Time, Cost, Quality, HR, Communications, Risk and Procurement Management
  - Cf. PMI's PMBOK <http://www.pmbok.com> and Standish Group

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

23

Part III ► Chapter://2 ► Project Management

## PM Initiate Phase Activities

Activities to start with in the Initial Phase

- ☉ Prepare for Product Life Cycle Management
- ☉ Projected Organization and Personnel Management
- ☉ Establish open communication in the team
- ☉ Advocate for customer vs. Advocate for team vs. ...
- ☉ Interim Milestone (IM) of Initial Phase:
  - Core Team Organized

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

24

Part III ► Chapter://2 ► Project Management

## PM Tools

- ☉ General Project Management Tools
  - e.g. support for GANTT charts, PERT diagrams)
- ☉ Process Models
  - Deliverable-oriented process models
- ☉ Dedicated tools
  - Risk management
  - Prediction knowledge bases
  - Requirement tools
- ☉ Few (if any) project management research dedicated to Web Application production
  - Requires experience

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke 25

Part III ► Chapter://2 ► Project Management

## PM-Tool: Gantt Chart

- ☉ Gantt Chart - Preferred visual reporting device used for conveying a project's schedule.
  - Graphically displays the work breakdown, total duration needed to complete tasks, as well as %completion
  - Does not display level of effort, and is not an effective planning tool on its own
  - May be integrated with other spreadsheet-type reporting devices that convey additional information related to project planning

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke 26

Part III ► Chapter://2 ► Project Management

## PM-Tool: Gantt Chart 2

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke 27

Part III ► Chapter://2 ► Project Management

## PM-Tool: Deliverables

```

    graph TD
      RA[Requirements Analysis] --> V1[Validation]
      V1 --> RD[Requirements Definition]
      RD --> V2[Validation]
      V2 --> D[Design]
      D --> V3[Validation]
      V3 --> I[Implementation]
      I --> V4[Validation]
      V4 --> T[Testing]
      T --> V5[Validation]
      V5 --> OM[Operation & Maintenance]
      OM --> RV[Re-Validation]
    
```

- Requirements Analysis:
  - Feasibility study
- ☉ Requirements Definition:
  - Req. specification
- ☉ Design:
  - Design specification
- ☉ Implementation:
  - Web Application code
- ☉ Testing:
  - Test result report
- ☉ Delivery:
  - Acceptance test / final system
- ☉ Operation:
  - Usage report, feedback

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke 28

Part III ► Chapter://2 ► Project Management

## PM-Tool: Milestones

- ☉ **Milestones** – Significant event in the project, usually completion of a major deliverable
  - Important checkpoints or interim goals for a project
  - Used to catch scheduling problems early
  - Name by noun-verb form, e.g. "report due", "prototype complete"
- ☉ Milestone "Rules of thumb"
  - Too many milestones are useless
  - Focus on hard-results (Not: 80% of Site finished)

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke 29

Part III ► Chapter://2 ► Project Management

## Risks & Potential Sources

- ☉ Potential sources:
  - **People** – e.g. Customer, Team
  - **Process** – e.g. Schedule, Requirements, Design
  - **Technology** – e.g. Availability, Security
  - **Environmental** – e.g. Legal, Business
- ☉ Risk Management is a recurring process throughout the whole project
  - There is no excuse for not doing it...

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke 30

Part III ► Chapter://2 ► Project Management

## Risk Management Process

- ☉ **Risk** – Any event that could potentially have a negative impact on the project
  - Remember: Risk is not a problem as refers to the future!
  - Evaluate: Quality analysis (prioritize effect on project objective) & Quantity analysis (probability and estimating implications)

Related to Source: MSFv3 Risk Discipline Paper  
Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://2 ► Project Management

## Risk Assessment (simplified)

Risk	Probability (1-7)	Impact (1-7)	Total Risk (P x I)
Lead Developer leaves team	2	6	12
Regulation §1-3	2	7	14
WS not available	4	5	20

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://2 ► Project Management

## Organization Structure

*Will not be covered by this lecture*

Some notes:

- ☉ Few (if any) Web Engineering Research
- ☉ Cf. standard Software Engineering literature
- ☉ Regarding evolution of content
  - Workflows respectively process models for publishing content and people involved
  - Cf. Content Management Systems literature

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://2 ► Project Management

## Costs Estimation

*Will not be covered by this lecture*

Some notes:

- ☉ Few Web Engineering Research
- ☉ Cf. standard Software Engineering literature
- ☉ Issues to look at
  - Costs for Marketing (search engines, advertising)
  - Return on investment (ROI) have to be considered, e.g. advertisements, integration of other Web Applications (Marketplaces, Web Application Production Lines)
  - Computer & Network costs
  - Political influences

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

*Verteilte Web-basierte Systeme – SS 2006*

Chapter://3

## Web Software Process Models

Part III ► Chapter://3 ► Web Software Process Models

## Goals of Web Engineering

- ☉ Develop (high quality) Web Applications
  - Effective
  - Efficient
  - Achieve desired application
  - in a Predictable Way
- ☉ **Maintain and Evolve**
  - **Plan for change** (Solution may change the problem!!!)

...using systematic, disciplined and quantifiable Approaches: Process Models

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://3 ► Web Software Process Models

## Production Process

- ◉ “Idea” during “software crisis”
  - Apply methods to software development
  - Describe the process of software development with Process Model
- ◉ “Visible” development process
  - Important for Project Management
- ◉ Lessons learned in Software Engineering:
  - Process is complex and variable
  - Detailed process Models – still research
- ◉ Different Processes appropriate for different classes of problems
- ◉ Lessons Learnt: Applying a process adds “6% success factor”

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke 37

Part III ► Chapter://3 ► Web Software Process Models

## Process Model

- ◉ Applying a process model to a Web Engineering specific problem
- ◉ Focus on systematic, disciplined and quantifiable development and evolution

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke 38

Part III ► Chapter://3 ► Web Software Process Models

## Process Models and WebE

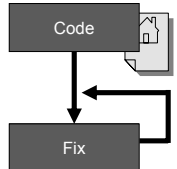

- ◉ Code-and-fix model (ad hoc development)
- ◉ The Waterfall model
- ◉ Prototyping model
- ◉ Evolutionary Development model
- ◉ Spiral model
- ◉ Rational Unified Process model
- ◉ MSFv3 Process model
- ◉ Agile Processes
- ◉ Reuse-Oriented Approaches
- ◉ WebComposition Process model
- ◉ Agile Processes, XP, Scrum
- ◉ And many, many more...

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke 39

Part III ► Chapter://3 ► Web Software Process Models

## Code-and-fix Model

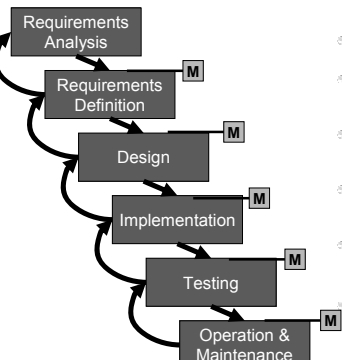

- ◉ Oldest Model – and still in use
  - Works “pretty well” for small projects in the early beginning
  - Test phases usually very long and unpredictable
  - Susceptible to Spaghetti-Code & -Linking
- ◉ User requirements often neglected
- ◉ Fixing bugs expensive
- ◉ Unsuitable for team work
- ◉ Unsuitable for most Web projects

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke 40

Part III ► Chapter://3 ► Web Software Process Models

## The Waterfall Model

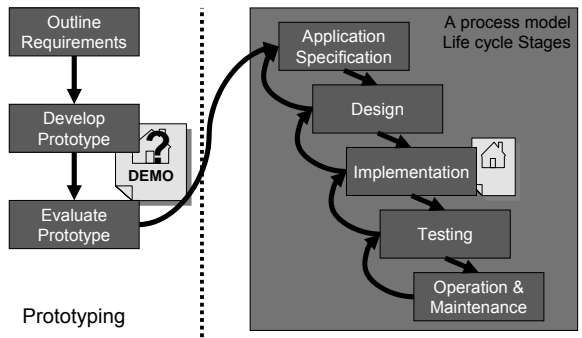

- ◉ Life Cycle Model – software process as number of stages
- ◉ Derived from other engineering approaches (late sixties)
- ◉ Used for practical Web Application development in several variants
- ◉ Completion of stage / milestone needed to proceed to following stage (M)
- ◉ Negative: Problems in early stages
- ◉ Popular for management

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke 41

Part III ► Chapter://3 ► Web Software Process Models

## Prototyping Model

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke 42

Part III ► Chapter://3 ► Web Software Process Models

## Prototyping Model II

- ☉ Prototype – *only* responsible for defining system requirement
- ☉ Suitable if system requirements can not be described completely in the beginning
- ☉ Applicable for reuse approaches
- ☉ Open Process Model – use of any process model
- ☉ Further Issues
  - Good for motivation of team
  - Increases trust of customer

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://3 ► Web Software Process Models

## Evolutionary Development

```

    graph TD
      AS[Application Specification] --> DI[Design & Implementation]
      DI --> UT[Usage Test]
      UT --> AO{Application Ok?}
      AO -- No --> DI
      AO -- Yes --> DO[Deliver / Operate]
    
```

- ☉ Successive Versions Model, Exploratory Evolutionary Development
- ☉ Aims at fast product implementation
- ☉ Delivery if product corresponds to subjective requirements
- ☉ Monolithic view hinders reuse
- ☉ Measuring progress difficult

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://3 ► Web Software Process Models

## Spiral Model (Risk-Driven)

Source: Barry Boehm's spiral model Computer 1988(5) pp. 61-72 – © 1988 IEEE

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://3 ► Web Software Process Models

## Spiral Model Template

Project, Date, ...	
Objectives	Improve O1 and O2
Constraints	Within t, costs, ...
Alternatives	Buy A1
Risks	Integration of X
Risk resolution	Develop Prototype, Product Survey
Results	Prototype works, flexible with A3
Plans	Develop Product and integrate A3
Commitment	Fund further 6 month

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://3 ► Web Software Process Models

## Rational Unified Process®

Management Perspective = RUP

- Unified Software Development Process
- Jacobson, Booch und Rumbaugh

Source: Philippe Kruchten, A Rational Development Process, Crosstalk, 9(7), July 1996

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://3 ► Web Software Process Models

## Management Perspective

Development Life Cycle

- Inception:
  - vision
  - business case
  - scope of the project
- Elaboration: Planning
- Construction
- Transition: Deliver, Training
- Evolution
  - Life of software after initial development cycle

Source: Philippe Kruchten, A Rational Development Process, Crosstalk, 9(7), July 1996

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://3 ► Web Software Process Models

## Technical Perspective

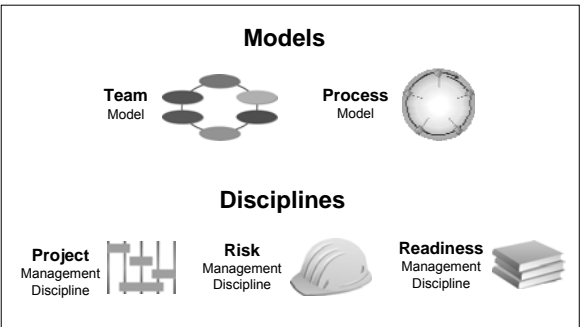

- Iteration Activities
  - Planning
  - Analysis
  - Design
  - Implementation
  - Testing
- Iteration is intellectual activity – not a stage for certain task

Source: Philippe Kruchten, A Rational Development Process, Crosstalk, 9(7), July 1996  
Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://3 ► Web Software Process Models

## Key MSF Components

**Models**

- Team Model
- Process Model

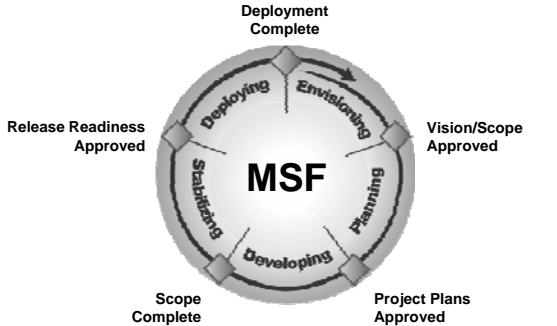

**Disciplines**

- Project Management Discipline
- Risk Management Discipline
- Readiness Management Discipline

Source: <http://www.microsoft.com/technet/solutions/techguide/msf/default.aspx>  
Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://3 ► Web Software Process Models

## MSF Process Model

**MSF**

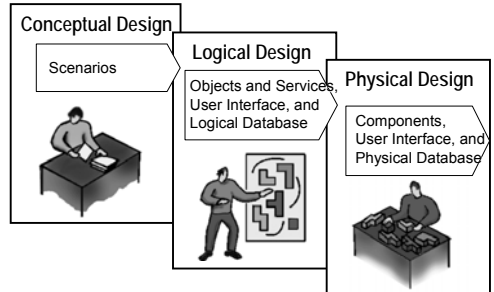

Stages: Envisioning, Planning, Developing, Deploying

Milestones: Vision/Scope Approved, Project Plans Approved, Scope Complete, Release Readiness Approved, Deployment Complete

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://3 ► Web Software Process Models

## Design Process Overview

Conceptual Design: Scenarios

Logical Design: Objects and Services, User Interface, and Logical Database

Physical Design: Components, User Interface, and Physical Database

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://3 ► Web Software Process Models

## Agile Processes

- Reaction to the “bureaucratic” process models
  - Lightweight methodologies (now agile methodologies)
  - Try to answer Too much process vs. no process

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

Part III ► Chapter://3 ► Web Software Process Models

## Agile Manifesto

- Principles defined by Manifesto for Agile Software Development
  - Individuals & interactions > processes & tools
  - Working software > comprehensive documentation
  - Customer collaboration > contract negotiation
  - Responding to change > following a plan
  - **Manifesto acknowledges the value of the right items, but focuses the value on the left more**
- For further information, cf.: <http://agilemanifesto.org/>

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke

## Agile (Process) Findings

- ⊗ Separation of design and construction
  - Construction is automated by the compiler
  - ... all the effort is design (this includes coding)
  - Design is a creative process ...
  - as such: not easy to plan, predictability is impossible
- ⊗ Iterative development is essential
  - Allows to deal with changes in required features
- ⊗ Style of planning
  - Long term plans: fluid
  - Short term plans: stable for a single iteration

## Agile (Process) Findings - 2

- ⊗ Duration for an iteration
  - In general as short as possible (depends: customer & developer)
  - E.g. XP - between one and three weeks
  - E.g. SCRUM - a month
- ⊗ Accepting the process rather than imposition of a process
  - Accepting a process requires **commitment**
  - I.e. empowers development team
  - I.e. everyone in team equal place in leadership

## Agile Methodologies

- ⊗ XP (Extreme Programming)
  - Testing as foundation of development
  - Write tests first
  - Evolutionary design process with focus on refactoring
- ⊗ Cockburn's Crystal Family
  - Different projects require different methodologies
  - Focus on least disciplined methodology (that could still succeed)
  - Iteration reviews encouraging the process to be self-improving
- ⊗ Scrum
  - Iteration = Sprints (of 30 days)
  - Scrum = Every day fifteen minute meeting
- ⊗ Feature Driven Development (FDD)
  - Start: Develop an Overall Model, Build a Features List, Plan by Feature
  - Iteration: Design by Feature, Build by Feature
- ⊗ Many others
  - RUP and MSF can be used in an agile manner – but don't have to!

## Reuse-Oriented Approaches

- ⊗ Web Engineering in context of Reuse
- ⊗ Product is assembly from *reusable components*
  - Idea: All needed Components exist
- ⊗ These Approaches focus on being **agile** in the context of:
  - **Producer Reuse**
  - **Consumer Reuse**

## Model for Producer Reuse

- ⊗ *Develop (Components) for Reuse*
- ⊗ Domain Engineering
  - Process Model for Production of Domain Components
- ⊗ Process Model
  1. Domain Analysis
  2. Develop Components
  3. Deploy Components in Reuse-Repository
  4. Make them available via Registries

## Model for Consumer Reuse

- ⊗ *Develop with Reuse (of Components)*
- ⊗ Orthogonal Process Model
- ⊗ Process Model
  1. Accessing
  2. Understanding
  3. Adapting

Part III ► Chapter://3 ► Web Software Process Models

## WebComposition

- ☞ WebComposition project
  - Gaedke et al., University of Karlsruhe, Germany
- ☞ Vision:
  - Develop Web applications in an agile way by reusing components and services – Focus on Evolution
- ☞ Project:
  - Reuse-Oriented Process Model
  - Middleware: WebComposition Service Linking System (WLS)
  - Reuse-Repository & UDDI as Registry
  - System Model: i2Map & System Description Framework (SDF)
- ☞ History:
  - First developments in 1996
  - Used for different projects, e.g. Global e-Procurement System of Hewlett-Packard, Notebook University Karlsruhe, Mobile University project of Microsoft Research

Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke 61

Part III ► Chapter://3 ► Web Software Process Models

## WebComposition Simplified

- ☞ Life-Cycle of any Service with focus on Evolution
  - Web Application is a set of services (realizing features)
- ☞ Planning for Reuse (Analysis)
  - Domain Engineering, RNA, Ontology
- ☞ Producer Reuse (Design)
  - Development of Reusable Services and Artifacts
- ☞ Consumer Reuse (Realization)
  - Development with Reusable Services and Artifacts

© 1997-2005 Dr. Martin Gaedke  
Verteilte Web-basierte Systeme Vorlesung SS2006 - © 1999-2006 by Dr.-Ing. M. Gaedke 62

Part III ► Chapter://3 ► Web Software Process Models

## WebComposition Process

- ☞ Focus on Features
  - Working artifact is unit of reuse
  - Agile Process for each service
- ☞ Aspects
  - Reuse-Driven
  - Risk-Driven
  - Milestones
  - Hypermedia & Composition in mind
- ☞ Guiding models

Part III ► Chapter://3 ► Web Software Process Models

## More on Process Models

- ☞ OPEN Process
  - OPEN Consortium
  - Contract-oriented stages
  - Coordination with other processes
- ☞ Web Engineering Process Models
  - Hot research topic – no standards yet
  - In most cases: derived from Spiral and focus on object oriented/based design models
- ☞ Many others are available – in most cases modifications of the Process Models presented here
