Exercise 1 (Maximum Cardinality Cut).**(2 + 9 + 4 points)**

In the MAXIMUM CARDINALITY CUT problem, we are given an undirected graph $G = (V, E)$. We want to partition $V = \{v_1, \dots, v_n\}$ into two disjoint subsets S and T with $S \cup T = V$ such that the number of edges vw between a vertex $v \in S$ and a vertex $w \in T$ is maximized. We call these edges *crossing edges* because they *cross* the cut (S, T) .

Consider the following algorithm A . Initially, ALG sets

$$S = \{v_1, \dots, v_{\lceil n/2 \rceil}\} \quad \text{and} \quad T = \{v_{\lceil n/2 \rceil + 1}, \dots, v_n\}.$$

In each step, ALG searches for a vertex v_i that can be moved from S to T (or vice versa) to increase the number of crossing edges between S and T by at least 1. If such a vertex v_i is found, ALG moves it to the other set and repeats. Otherwise, ALG terminates and outputs (S, T) .

- a) Argue that ALG has polynomial running time.
- b) Prove that ALG is a $1/2$ -approximation algorithm.
- c) Give an example that shows that ALG is not better than a $1/2$ -approximation.

Exercise 2 (Steiner Tree in Metric Graphs).**(15 points)**

In this variant of the STEINER TREE problem, we are given an undirected graph $G = (V \cup S, E)$ with metric edge weights $c : E \rightarrow \mathbb{R}$. We call vertices in V *required* and those in S *Steiner*. Our task is to find a *Steiner tree* $T = (V \cup S', F)$ with $S' \subseteq S$ and $F \subseteq E$ that connects all required vertices, and (optionally) some Steiner vertices, while minimizing the total weight, see Fig. 1.

The metric closure G' of G connects every vertex pair u, v by an edge with weight $c'(\{u, v\})$ corresponding to the length of a shortest uv -path in G .

Prove that a minimum spanning tree of V in the metric closure of G (a minimum-cost tree in G' connecting only vertices of V) can be used to obtain a 2-approximation for this problem.¹

Figure 1: A graph G with required (black) and Steiner (white) vertices, and a Steiner tree.

¹Corrected on June 21st, the metric closure was previously missing.
